

Today's Checklist

Christopher Johnson · Saturday, May 2, 2026 · Check items off as you complete them

Total time: ~3 hours for Phases 1-7. Phases 8-10 spread to Sunday-Monday.

Single most-leverage item: Phase 1 (GitHub push). Everything else is downstream.

When you finish a phase, send me "phase X done" — I'll confirm and tell you what to verify.

■ Quick wins (<5 min total — do first)

- Delete the test Lead 00Qnt00000cHJ6nMAG from Salesforce

(SF → Leads → search "TEST PROPERTY_LEADS_TEST" → Delete)

- Paste worker URL into propertyleads.com webhook config + unpause delivery

URL: <https://propertyleads-ppl-worker.cbfcalcio5.workers.dev>

(Until done, no real PPL leads flow.)

Phase 1 — GitHub (10 min) — UNBLOCKS EVERYTHING

- Create private repo at github.com/new → name dealmatcher
 - `cd ~/dealmatcher && git init -b main && git add . && git commit -m "Initial commit"`
 - `git remote add origin git@github.com:cbfcalcio5/dealmatcher.git`
 - `git push -u origin main`
 - Verify `.env.cheaphomesfla` is NOT in the pushed file list
-

Phase 2 — Railway (~60 min)

- Sign up at railway.app (login with GitHub) — Hobby plan (\$5/mo)
- New Project → Deploy from GitHub repo → select dealmatcher
- Rename auto-created service to scraper, set:
 - Start command: `python cheaphomesfla_scraper.py`
 - Cron: `0 14,18,22 *`
- Project sidebar → Shared Variables → paste all 16 env vars from `.env.cheaphomesfla`
(SF_, SENDGRID_API_KEY, TWILIO_, MS_, GREENAPI_, EMAIL_ADDRESS, ALERT_TO)
- **Important:** add `CLOUD_MODE=true` (tells scripts not to write to ~/Desktop)
- Add `jb_email` service: `python jb/email_campaign.py` cron `0 12 1-6`

- Add jb_sms service: `python jb/sms_campaign.py cron 15 12 1-6`
 - Add jb_followup service: `python jb/followup.py cron 0 12 *`
 - Add jb_digest service: `python jb/digest.py cron 30 12 *`
 - Add watchdog service: `python tools/system_watchdog.py cron 0 13 *`
 - Add cloud_health service: `python tools/cloud_health_check.py cron 0 13-1 1-6`
 - Add daily_kpi service: `python tools/daily_kpi_email.py cron 15 13 1-6`
 - Manually trigger each of the 8 services once → verify logs are clean
-

Phase 3 — Cloudflare Workers re-deploy (~20 min)

- **propertyleads-worker:**

```
cd ~/dealmatcher/cloudflare/propertyleads-worker
wrangler kv namespace create LAST_LEAD_AT
# paste returned id into wrangler.toml
wrangler deploy
```

- **motivatedsellers-worker** — same pattern with LAST_LEAD_AT

- **whatsapp-worker** — same pattern but with LAST_MSG_AT

- **sendgrid-events:**

```
cd ~/dealmatcher/cloudflare/sendgrid-events
wrangler kv namespace create LAST_EVENT_AT
# paste id → wrangler deploy
wrangler secret put SF_USERNAME # info@johnsonbuys.com
wrangler secret put SF_PASSWORD
wrangler secret put SF_SECURITY_TOKEN
wrangler secret put SF_LOGIN_DOMAIN # login
```

- **railway-deploy-alerts:**

```
cd ~/dealmatcher/cloudflare/railway-deploy-alerts
wrangler kv namespace create LAST_ALERT_AT
# paste id → wrangler deploy
openssl rand -hex 16 # save this secret
wrangler secret put SHARED_SECRET # paste secret
wrangler secret put SENDGRID_API_KEY
wrangler secret put TWILIO_ACCOUNT_SID
wrangler secret put TWILIO_AUTH_TOKEN
wrangler secret put TWILIO_FROM # +19549534554
wrangler secret put ALERT_SMS_TO # +13055759040
wrangler secret put FROM_EMAIL # info@johnsonbuys.com
wrangler secret put ALERT_TO # info@johnsonbuys.com
```

- **Test all 5 /health endpoints with curl — each returns "ok": true:**

```
curl https://propertyleads-ppl-worker.cbfcacio5.workers.dev/health
curl https://motivatedsellers-ppl-worker.cbfcacio5.workers.dev/health
curl https://cheaphomesfla-whatsapp-webhook.cbfcacio5.workers.dev/health
curl https://sendgrid-events.cbfcacio5.workers.dev/health
```

```
curl https://railway-deploy-alerts.cbfcalcio5.workers.dev/health
```

Phase 4 — Webhooks pointing AT the workers

■ SendGrid Event Webhook:

- Settings → Mail Settings → Event Webhook
- URL: <https://sendgrid-events.cbfcalcio5.workers.dev/>
- Events: Open, Click, Bounce, Spam Report, Unsubscribe, Group Unsubscribe, Dropped
- Toggle ON → Save → Click "Test Your Integration"

■ Railway deploy webhook:

- Railway → Project → Settings → Notifications → Webhooks
- URL:

https://railway-deploy-alerts.cbfcalcio5.workers.dev/?secret=YOUR_SECRET

- Triggers: Deploy Failed + Deploy Crashed
- Save

■ GitHub Actions secrets (for CF auto-deploy):

- GitHub repo → Settings → Secrets → Actions → New repository secret
- Name: CLOUDFLARE_API_TOKEN → create at dash.cloudflare.com/profile/api-tokens
- Name: CLOUDFLARE_ACCOUNT_ID → from dash.cloudflare.com right sidebar

Phase 5 — Twilio /sms v2 (~15 min)

- Open `~/dealmatcher/docs/twilio_function_v2_deploy.md`
- Follow steps 1-6 (paste `sms_v2.js` into Twilio Functions console)
- Test inbound SMS from your phone: text "STOP" to +19549534554
- Confirm: Lead status updates to "Take me off the list", auto-reply received

Phase 6 — Mac cutover (5 min — ONLY after Phases 2-3 are green)

```
launchctl bootout gui/$(id -u)/com.johnsonbuys.emailcampaign 2>/dev/null
launchctl bootout gui/$(id -u)/com.johnsonbuys.smscampaign 2>/dev/null
launchctl bootout gui/$(id -u)/com.johnsonbuys.followup 2>/dev/null
launchctl bootout gui/$(id -u)/com.johnsonbuys.digest 2>/dev/null
launchctl bootout gui/$(id -u)/com.cheaphomes.dealmatcher 2>/dev/null
launchctl bootout gui/$(id -u)/com.cheaphomes.watchdog 2>/dev/null

mkdir -p ~/Library/LaunchAgents/_archived_2026-05-04
mv ~/Library/LaunchAgents/com.johnsonbuys.*.plist
~/Library/LaunchAgents/_archived_2026-05-04/ 2>/dev/null
mv ~/Library/LaunchAgents/com.cheaphomes.*.plist
```

```
~/Library/LaunchAgents/_archived_2026-05-04/ 2>/dev/null
```

■ Verify with: `launchctl list | grep -E "(johnsonbuys|cheaphomes)"` — should print nothing

Phase 7 — Salesforce dashboards (~60 min — open `sf_dashboards_guide.pdf`)

■ Pre-step: `python3 tools/sf_setup_helper.py` (creates 4 list views)

Build the 5 high-priority dashboards first:

- #1 Daily Lead Inflow
- #2 Active Pipeline by Status
- #4 Hot Buyers (CHF)
- #6 Today's Follow-ups
- #9 Revenue This Month

Then the other 5 if you have time:

- #3 Lead Source Performance
 - #5 Daily Deal Activity
 - #7 SMS + Email Campaign Health
 - #8 Conversion Funnel
 - #10 Buyer-Match Rate
- Pin all 10 to Home → Setup → User Interface → check "Home is the default tab"
-

Phase 8 — Subscriptions (10 min of forms)

- **ATTOM Data** — `attomdata.com` → Get a Quote → distress indicators, Miami-Dade
 - **TLO** — `tlo.com` → request demo, "skip-trace + property research"
 - **healthchecks.io** — free tier signup → create check named "watchdog" → copy ping URL
(I'll wire this into watchdog when API key arrives)
 - **MLS RETS access** — `miamirealtors.com` → MLS access form (~\$50-150/mo)
-

Phase 9 — Constant Contact transition (Sunday)

- `python3 tools/build_investor_list.py` (generates full investor CSV from SF + `senders.txt`)

- Login to Constant Contact
 - Create new email campaign → paste contents of ~/Desktop/cc_transition_email.html
 - Upload ~/Desktop/investor_contacts_clean.csv as the recipient list
 - Schedule send for Sunday morning
-

Phase 10 — Marketing launches (Sunday-Monday)

- FB Ads Manager — build Custom Audiences (per docs/audience_definitions.md)
 - FB Ads — build 1% Lookalikes
 - FB Ads — apply **Special Ad Category = Housing** (legally required)
 - FB Ads — save 3 seller-side variants as DRAFT (per docs/ad_copy_seller_side.md)
 - FB Ads — save 3 buyer-side variants as DRAFT (per docs/ad_copy_buyer_side.md)
 - Google Ads — Customer Match list upload (same hashed CSV)
 - Google Ads — 3 search keyword groups + ads per ad_copy_*.md
 - LinkedIn — manual outreach to top 5-10 LLC buyers per week (no spend)
-

Notes for myself

- All credentials live in your .env.cheaphomesfla and 1Password — copy from there into Railway Shared Variables and Wrangler secrets
- After Phase 6, **neither Mac is required for production** — they're peer dev environments only
- Watchdog runs daily at 9 AM ET; daily KPI email at 9:15 AM ET. Silence after 9:30 AM = something's broken
- If a Phase 2 or 3 deploy errors, paste the error to me and I'll get you unstuck immediately
